ABSTRACT: The present study was carried out to document the diversity of arborescent angiosperm taxa of Mundanthurai Range in the Kalakad-Mundanthurai Tiger Reserve (KMTR) of the southern Western Ghats in India. During the floristic survey carried out from January 2008 to December 2010, a total of 247 species and intraspecific taxa of trees and shrubs representing 175 genera in 65 families were recorded. The most speciose families are Euphorbiaceae (27 spp.), Rubiaceae (17 spp.), Myrtaceae (14 spp.), Lauraceae (13 spp.) and Annonaceae (11 spp.). Of the 247 taxa, 27 species are endemic only to this region which includes *Agasthiyamalaia pauciflora*, *Elaeocarpus venustus*, *Garcinia travancorica*, *Gluta travancorica*, *Goniothalamus rhynchantherus*, *Homalium travancoricum*, *Homaium jainii*, *Orophea uniflora*, *Phlogacanthus albiflorus*, *Polyalthia shendurunii*, *Symplocos macrocarpa* and *Symplocos sessilis*. This clearly signifies that this range is relevant to the conservation of the local flora.

INTRODUCTION

The Western Ghats is one of the biodiversity hotspots of the world (Myers *et al.* 2000). It is a mountainous range extending from the mouth of the river Tapti in Gujarat to Kanyakumari in Tamil Nadu. The floristic diversity of the Western Ghats is very significant as this hill range accommodates different vegetation types such as wet evergreen forests, moist and dry deciduous forests, montane forests, sholas, scrubs and savannas. Some of prominent research on the documentation of the tree species of the Western Ghats are Pascal and Pelissier's (1996) report on 103 tree species of Uppangala, a part of central Western Ghats, Parthasarathy's (1999) documentation of 122 woody species (114 trees) belonging to 89 genera and 41 families from southern Western Ghats and recently a compilation by Ramesh *et al.* (2007) of 526 arborescent species distributed in the Western Ghats and 241 of these in the southern Western Ghats. Ganesh *et al.* (1996) recorded 140 species of woody angiosperms from the Kalakad-Mundanthurai Tiger Reserve, southern Western Ghats. Other documentations exclusively on the Agasthiyamalai region's tree species were by Gopalan and Henry (2000), Mohanan and Sivadasan (2002) and Annamalai (2004). The Western Ghats also have a high proportion of endemism, comprising 1720 endemic species (i.e about 40%) out of c. 4500 species of flowering plants (Kaveriappa and Shetty 2001). Among the endemic species, 63% were represented by trees and the southern region of Western Ghats is rich in endemism by having 1051 endemic species (Ramesh and Pascal 1991; Tissot *et al.* 1994; Viswanathan 1999).

The Kalakad-Mundanthurai Tiger Reserve (KMTR) is situated in the southern Western Ghats in Tirunelveli district, Tamil Nadu, forming a part of the Agasthiyamalai region. This region is one of the plant diversity centres in

India for conserving global biological diversity and also declared as Regional Centre of Endemism in the Indian subcontinent (Davis *et al.* 1995). There are c. 2255 species of Angiosperms so far recorded from Kalakad-Mundanthurai Tiger Reserve, including 448 species endemic to the Western Ghats; in addition 150 species are strict endemics of the Agasthiyamalai region. This high rate of endemism is mostly attributed to the short dry period (1–4 months). The leeward side of Agasthiyamalai and Kalakad hills appears to be the zones of active speciation (Henry *et al.* 1984). The region also represents a rich reservoir for a large number of wild relatives of cultivated plant species (Viswanathan 1999; Gopalan and Henry 2000; Annamalai 2004).

Some of the recent studies that describe the importance of this region include Pascal *et al.* 1997; Gopalan and Henry 2000; Manickam *et al.* 2003; Ramesh *et al.* 2007. In recent years many new species were discovered and reported as a result of repeated field exploration: *Memecylon manickamii* (Murugan *et al.* 2000); *Memecylon tirunelvelicum* (Murugan *et al.* 2001); *Memecylon mundanthuraianum*, *Polyalthia tirunelveliensis*, (Viswanathan and Manikandan 2001a, b); *Glochidion balakrishnanii* (Jothi *et al.* 2002); *Xanthophyllum manickamii* (Murugan 2002); *Miliusa tirunelvelica* (Murugan *et al.* 2004); *Schefflera agasthiyamalayana* (Manickam *et al.* 2007); *Syzygium agasthiyamalayana* (Viswanathan and Manikandan 2008).

The present study was carried out with the objective of documenting the arborescent angiosperms of Mundanthurai Range of Agasthiyamalai Biosphere Reserve, southern Western Ghats, India in an exclusive manner.

MATERIALS AND METHODS

Study area

Mundanthurai Range lies between 08°31' N – 08°48' N

and 77°10' E – 77°21' E. It is situated on the eastern slope of Agasthiyamalai Biosphere Reserve and covers an area of about 270 km² (Figure 1). It is one of the important ranges in Kalakad–Mundanthurai Tiger Reserve (KMTR) of Tirunelveli district, Tamil Nadu, sharing the Agasthiyamalai peak (1868 m) with the neighbouring state, Kerala. This study area also covers a wide array of forest types such as southern tropical thorn forests (200 m), southern tropical dry deciduous forests (300 m), grasslands at lower altitude (500 m), southern tropical moist deciduous forests (500 m), Tirunelveli-semi evergreen forests (700 m), southern tropical wet evergreen (rain) forests (800 – 1500 m), subtropical montane forests and grasslands at higher altitude (>1500 m) (Gopalan and Henry 2000).

Data collection

The study area has been explored from January 2008 to December 2010 covering various seasons. A total of 36 field trips (120 field days) were conducted to the study area. The voucher specimens were collected and identified using local floras such as Beddome 1868 – 1874; Bourdillon 1908; Gamble and Fischer 1915 – 1936; Gopalan and Henry 2000 and the Biotik – Western Ghats v. 1.0 software application (Ramesh *et al.* 2007). The identity on the species was later confirmed by comparing specimens with authentic specimens at Madras Herbarium (MH), Coimbatore; French Institute of Pondicherry Herbarium (IFPH), Puducherry, St. Xavier's College Herbarium (XCH), Tirunelveli and M.S. Swaminathan Research Foundation, Community Agrobiodiversity Centre Herbarium, Wayanad (MSSH). The families were classified according to Bentham and Hooker Classification (1862 – 1883), with some alterations based on split-up of various families. The families as well as the genera are arranged in alphabetical order. All the processed voucher specimens were deposited at the Herbarium of French Institute (IFPH), Pondicherry.

RESULTS AND DISCUSSION

During the floristic survey, a total of 247 species

representing 175 genera distributed in 65 families were recorded from Mundanthurai range of southern Western Ghats (Table 1). This includes 218 species of canopy and understorey trees, 23 species of shrubs (height < 5m, DBH > 1cm) and 6 species of woody climbers. The most speciose families of the study area include Euphorbiaceae with 27 species, followed by Rubiaceae (17 spp.), Myrtaceae (14 spp.), Lauraceae (13 spp.) and Annonaceae (11 spp.). Ganesh *et al.* (1996) also mentioned Lauraceae, Rubiaceae and Euphorbiaceae as the three most dominant families in terms of species richness in the forest. The most speciose genera include *Eugenia* (8 spp.), followed by *Syzygium* (6 spp.), 5 spp. each in *Garcinia*, *Elaeocarpus* and *Memecylon*, 4 spp. each in *Diospyros*, *Terminalia* and *Mallotus*. The pictures of selected species are given in Figures 2 – 4. Of the 247 arboreal taxa, about 88% consist of evergreen species.

In this study, tree species that are predominantly associated with their respective vegetation were assessed: *Albizia odoratisima*, *Bauhinia racemosa*, *Capparis grandis*, *Erythroxylon monogynum* are some of the important species distributed in southern tropical thorn forests that exist around Mundanthurai and its adjoining areas. The southern tropical dry deciduous forests existing near Servalar, Karaiyar, Kattlemalai and Papanasm region are commonly associated with species such as *Albizia odoratisima*, *Lannea coromandelica*, *Pterocarpus marsupium*, *Terminalia chebula*, *Hiptage benghalensis*, *Vitex altissima*. Grasslands at lower altitude (500 m), southern tropical moist deciduous forests (500 m) includes tree species such as *Dillenia pentagyna*, *Acronychia pedunculata*, *Pterocarpus marsupium*, *Bridelia scandens*, *Clausena indica*, *Glochidion ellipticum*, *Terminalia paniculata*, *Helectres isora*, *Careya arborea* as important components. Tirunelveli-semi evergreen forests (700 m) in patches and belts commonly occur in Injikuzhi, Kannikatty, 8th mile with commonly occurring species such as *Antidesma menasu*, *Erythroxylon lanceolatum*, *Filicium decipiens*, *Gordonia obtusa*, *Holigarna arnottiana*, *Diospyros spp.*, *Cleistanthus travancorensis*, *Psychotria nigra*, *Gomphia serrata*. Southern hilltop tropical evergreen forests (800 – 1500 m) common in Chinnapul, Kaliparpuli (Pandipathu), Chemunji and Upmamottai region include *Agasthiyamalaia pauciflora*, *Cullenia exarillata*, *Dimocarpus longon*, *Elaeocarpus tuberculatus*, *Mesua ferrea*, *Garcinia rubric-echinata*, *Gluta travancorica*, *Hopea parviflora* as top canopy, *Syzygium mundagam*, *Elaeocarpus serratus*, *Knema attenuata*, *Cinnamomum spp.* as shade loving canopy, *Acronychia pedunculata*, *Agrostistachys borneensis*, *Callicarpa tomentosa*, *Elaeocarpus munronii*, *Eurya nitida*, *Goniothalamus wightii*, *G. rhyncantherus*, *Humboltia unijuga*, *Tabernaemontana heyneana* as a third layer. Subtropical montane forests confined to Agasthiyamalai, Kandhavarai, Purangal, Aduppukkal include species such as *Ilex wightiana*, *Photinia notoniana*, *Aglaiia bourdillonii*, *Euphorbia santapau*, *Canthium angustifolium*, *Actinodaphne spp.*, *Euonymous spp.* along with *Ochlandra travancorica*. Grasslands at higher altitude (>1500 m) confined to Chinnapul, Kaliparpul, Upmamottai, Pandiyankottai having species such as *Arundinella purpurea*, *Chrysopogon orientalis*, *Themeda tremula* along with *Acrotrema arnottianum*, *Vernonia peninsularis*.

FIGURE 4. MELIACEAE: A. *Aglaia bourdillonii* Gamble; MYRTACEAE: B. *Eugenia discifera* Gamble; RUBIACEAE: C. *Hedyotis travancorica* Bedd.; SYMPLOCACEAE: D. *Symplocos macrocarpa* Wight ex C.B. Clarke; VACCINIACEAE: E. *Vaccinium neilgherrense* Wight; VERBENACEAE: F. *Callicarpa tomentosa* (L.) Murr.

In this study, 98 endemic species are documented of which 27 species are confined only to the Agasthiyamalai region that includes some endemic and threatened species such as *Agasthiyamalaia pauciflora*, *Elaeocarpus venustus*, *Garcinia travancorica*, *Gluta travancorica*, *Goniothalamus rhynchantherus*, *Homalium travancoricum*, *Orophea uniflora*, *Phlogacanthus albiflorus*, *Polyalthia shendurunii*, *Symplocos macrocarpa*, *Symplocos sessilis* and *Tricalysia apiocarpa*. Gopalan and Henry (2000) assessed the status of 125 strict endemics of the Tamil Nadu part of the Agasthiyamalai region’s eastern slopes, of which 83 are woody species including 46 species of trees and 37 species of shrubs. Mohanan and Sivadasan (2002) recorded 297 tree species from western slopes (windward side) of the Agasthiyamalai region. Ganesh *et al.* (1996) recorded 173

species of angiosperms from the Kalakad-Mundanthurai Tiger Reserve, southern Western Ghats, of which 90 species of trees and 50 species of shrubs. Annamalai (2004) reported *c.* 500 species of trees from the entire Kalakad-Mundanthurai Tiger Reserve. In the present study the number of arboreal species documented within an area of 270 km² (Mundanthurai Range) is more complete when compared to previous studies.

This list provides comprehensive information on the recent floristic diversity of the Mundanthurai Range in the Kalakad-Mudanthurai Tiger Reserve, updating the species diversity including new species, endemic and threatened and resulting in a good database that will be useful to implement better conservation strategies and management of tropical forests and ecosystems.

ACKNOWLEDGMENTS: We thank Shri R. Sundararaju, Principal Chief Conservator of Forests and Chief Wildlife Warden (Retd.), Tamil Nadu Forest Department, Chennai and Shri A. Ramkumar Former Chief Conservator of Forests and Field Director, Project Tiger, KMTR and Shri H. Malleshappa, Chief Conservator of Forests and Field Director, Project Tiger, KMTR, for their support throughout the field work. We would like to thank Mr. Jeykumar Kani, Anti-poaching Watcher, Mundanthurai Range, KMTR, for his constant support, and assistance during the field work. We extend our thanks to Dr. S. Ravi Shankar, Assistant Professor, Department of Botany, Madras Christian College, Chennai, for his valuable suggestion and help in the manuscript preparation. We also thank Dr. W. Arisdason, Assistant Professor, Department of Botany, Madras Christian College, Chennai, for his help in plant authentication.
